

PLATFORM REPORT • Q3 2026

Every region, one artifact.

Nineteen regions served 41.2 billion requests this quarter at a 38 ms p95, through 18,402 atomic deploys and four incidents — one of them major.

01

Executive summary

The quarter's work was routing. Requests from Germany, France and the Netherlands now resolve to fra1 by rule instead of by latency probe, which took 6 ms off the European p95 and removed the last cross-border hop for checkout. Edge KV moved its leader to fra1 for the same reason.

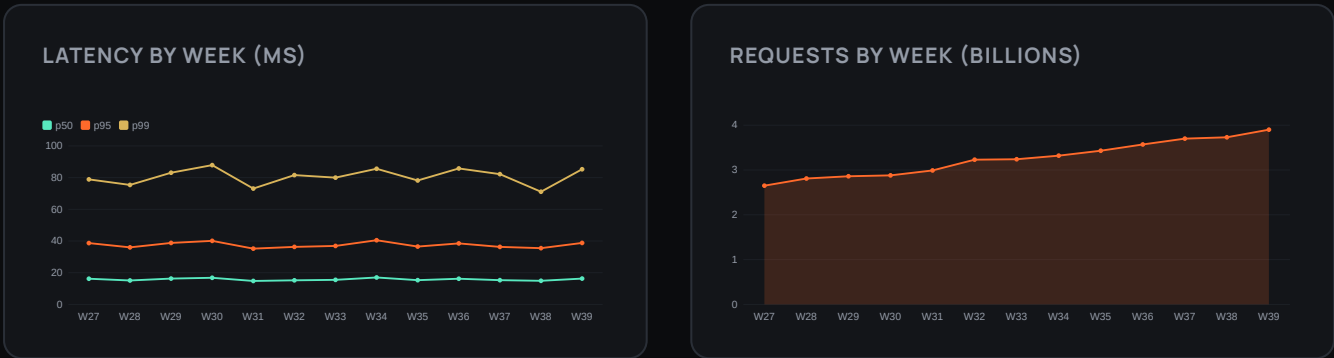

Deploys grew faster than traffic: 18,402 builds reached all nineteen regions, each acknowledged in under half a second, and 214 were rolled back by hash – every one of them in under four seconds, with no requests dropped.

São Paulo is the exception. A saturated carrier link in gru1 raised its p99 to 1.4 s for 47 minutes in September and its quarter p95 sits at 148 ms, four times the median region. The link was replaced; a second carrier is contracted for November.

Next quarter: request-level routing on cookie and header (shipping in 2.15), and a p99 alert per region rather than per project.

03

Deployments

The sixty-four most recent deploys to production. A deploy is one content-addressed build reaching every region at once; a rollback is a deploy of an older hash.

04

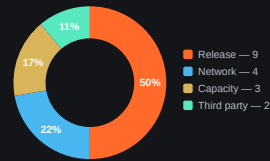

Incidents

INC-311 · major · 2026-09-12 14:20 · 47 min

Elevated 5xx in gru1

A saturated upstream link at the São Paulo edge raised p99 to 1.4 s and returned 5xx for 0.42% of requests. Traffic was shifted to iad1 within six minutes; the link was replaced by the carrier.

CAUSES THIS YEAR

INC-298 · minor · 2026-08-27 09:05 · 2 h 10 min

Slow cold starts after runtime 2.14

Isolates were not pre-warmed after the runtime upgrade, adding 180 ms to first requests in seven regions. Fixed by warming before cutover (build 7d1e09).

INC-284 · minor · 2026-08-03 22:40 · 31 min

KV replication lag

Cross-region replication from the fra1 leader fell 9 s behind under a bulk import. Reads stayed in-region; writes queued and drained without loss.

INC-277 · notice · 2026-07-19 11:15 · 18 min

Dashboard login loop

A cookie with the wrong SameSite attribute sent some users back to the login page. No traffic was affected.

05 Configuration

Routing rules ship with the deploy, versioned with the code. This is the rule set in production at the end of the quarter.

```
# halyard.toml – routing, as deployed in rl_4a91
[routing]
default = "nearest"

[[routing.rule]]
match = { geo = { country = ["DE", "FR", "NL"] } }
region = "fra1"

[[routing.rule]]
match = { header = { "x-canary" = "1" } }
build = "8f2c41"
weight = 10

[kv]
leader = "fra1"
replication = "async"
```
