

# pdf

This document was generated with WebFluent's PDF output.

## Summary

WebFluent generates PDF documents directly from .wf source files. The same declarative syntax used for web UIs works for documents.

## Data Table

| Item      | Category | Status   | Value   |
|-----------|----------|----------|---------|
| Widget A  | Hardware | Active   | \$1,200 |
| Service B | Software | Pending  | \$3,400 |
| License C | Legal    | Complete | \$800   |

## Key Points

- PDF output uses raw PDF 1.7 — no external dependencies
- Tables, headings, text, lists, and code blocks are supported
- Automatic page breaks with headers and footers on every page
- Font support for all 14 PDF base fonts

Interactive elements like Button and Input are rejected at compile time in PDF mode.

```
Document(page_size: "A4") {  
  Heading("Hello!", h1)  
  Text("Generated with WebFluent.")  
}
```

WebFluent — build for the web, print for the world.

# Page Two

Content continues after PageBreak. Headers and footers repeat on every page.
